

ESSENTIAL SUMMER **VEHICLE CHECKS**

1 TYRES

When the weather's hot, your tyre pressure can increase. It's vital to check your tyres regularly throughout the summer months to ensure they don't become under-inflated.

2 ENGINE

Overheating engines are a major cause of car breakdowns. Keep an eye on your coolant system and car radiator, as they work harder in warmer temperatures.

3 AIR CONDITIONING

Keep your drivers comfortable and safe in the heat by checking the air conditioning unit in your vehicle. Issues with your air conditioning system can be very costly, so maintenance is key.

4 BATTERY

Heat can be tough on vehicle batteries. Hot weather can accelerate corrosion and cause water to evaporate from the battery. Get your battery tested regularly to keep on top of its efficiency.

5 FLUIDS

It's important to check fluid levels when the weather's warm! You should be regularly looking at your vehicle's oil, coolant, brake fluid and windscreen washer fluid.

6 CLUTCH

It's something that's easy to forget about - but your clutch can take a beating in the summer months with more traffic on the roads. Watch out for signs of wear like a high bite or a gritty feel to the pedal.
