

fleetwave® FAQs

All-new FleetWave® Dashboard

What is the all-new FleetWave Dashboard?

A faster, self-service Dashboard built for complex fleets. Configurable by role, governed by access controls, and designed to turn fleet data into action across operations, compliance, and maintenance. Go from days to minutes to create dashboards that matter to you, all within our core platform, FleetWave.

Does the dashboard support role-based access control?

Yes! The dashboard includes comprehensive role-based access controls, allowing administrators to configure dashboards and widgets based on keywords, roles, and hierarchy. Visible data is controlled through the hierarchy, giving you peace of mind only the right people have the right access to the data.

What's included?

We've upgraded core dashboard functionality with a new, smart, query builder with key features like drag-and-drop customisation, multiple dashboard pages, widget management, role-based access, sharing, and TV mode. We've also made it really simple to have consistent reporting across your teams.

Can I customise the layout of my dashboard?

Absolutely. The dashboard is as flexible as you need. You can drag and drop widgets to any position, resize them, and organise them however makes sense for your workflow. You can even show your layout in full screen, should you want to have the dashboards visible across screens in workshops, back office or for when you're presenting.

How do I see all my data?

FleetWave is designed to ingest your data from anywhere, not just fleet operations, with our self-service clicks-not-code integration solution [Smart Integrate](#). Once your data is in the FleetWave ecosystem, you can build any widget to visualise for your teams.

Can I share my dashboard with my team?

Yes. You can share entire dashboards or individual widgets with team members based on keywords, roles, or hierarchy, with a simple click of a button.

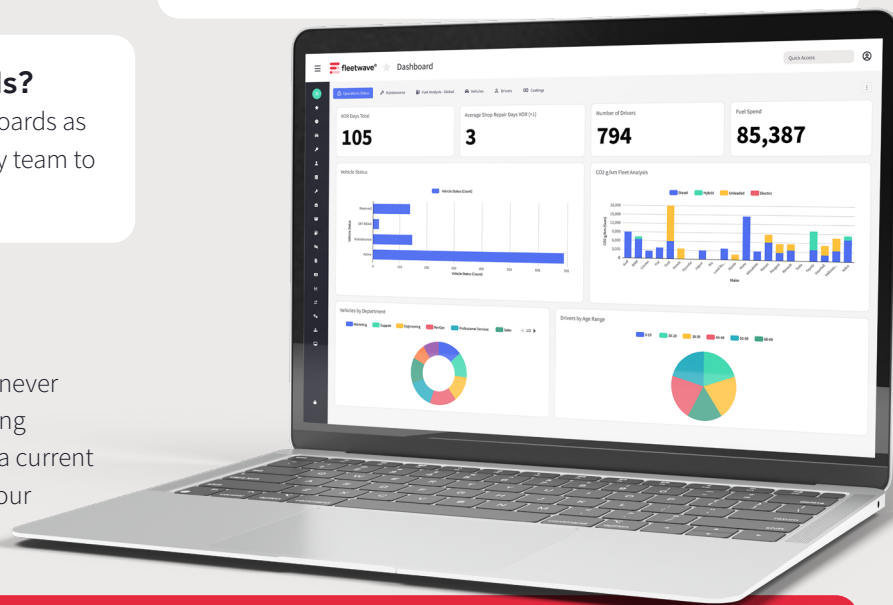

Can I create multiple dashboards?

Of course! You can create as many dashboards as you need, organised by tabs, allowing any team to see exactly what they need in the order they want.

Will I have to pay to access the all-new Dashboard?

Available to all SaaS and new clients. We never charge extra for new and upgraded features, including future dashboard functionality upgrades. If you are a current customer who is not on SaaS, please discuss with your Customer Service representative.
